

BA Cream (Anti-Allergy Sensitive Cream)

Anti-Inflammatory Effect up to 99%

50 gm

Apply a layer of BA Cream after the cleansing process in order to form a protective layer on your client's skin so as to allow the active ingredients to be absorbed by the skin quickly and safely.

Upon completion of your facial treatment, a layer of BA Cream is applied again to prevent any outbreak of skin problems after an intensive cells activation process during the facial treatment.
